

ST. LOUIS COUNTY DEPARTMENT OF PUBLIC WORKS

PYROTECHNIC DISPLAY PERMIT

A permit for a pyrotechnic display must be issued by St. Louis County for any display within the unincorporated areas of St. Louis County, and within any Municipality (within St. Louis County) other than a Municipality that has issued a municipal permit for the display (reference SLCRO, Section 810.030).

Approval from the fire protection district for the location at which the display is to occur must be obtained by the applicant **before** a permit can be issued by this Department.

Permit for a pyrotechnic display is issued with the provision that the following rules and regulations, authorized under the terms of SLCRO Chapter 810, be fully complied with. Non-compliance with these regulations shall result in the revocation of this permit.

For any display that charges admission to anyone viewing the display, a certificate of insurance shall be filed with this Office showing that liability insurance in the amount of \$50,000 for one injury, \$100,000 for two or more injuries, and \$50,000 for any property damage resulting from such a display, is in force for the dates of the display.

The signature of the applicant shall be deemed as his/her willingness to assume full responsibility for any damage to any property or any injury to any person or persons that may result from the discharging of any of the fireworks allowed under the terms of this Permit.

The person in charge of the display must be at least eighteen (18) years old and be physically and mentally competent for such responsibility.

There shall be at least two operators for each display, except the kind that are permitted as signals for parades, picnics, etc.

No fireworks are permitted to be discharged closer than the following:

- 200 feet from the closest building(s) or structure(s)
- 200 feet from any road, railroad or other means of public travel
- 200 feet from the closest spectator point
- 50 feet from any overhead obstruction

No discharge of any fireworks shall be permitted if the wind velocity reaches a speed over thirty (30) miles per hour.

All aerial displays shall be discharged in such a manor that the residue will not fall into the spectator area. The shells shall be discharged as vertically as possible, and should

Pyrotechnical Display Permit
Page 2

be discharged downwind from the spectator area if at all possible. If this cannot be practically accomplished, the shells should be aimed at a slight angle away from the spectator area providing this does not cause them to be discharged in a manner that could cause an undue hazard to anything below the point of discharge.

At least two (2) 2 ½ gallon pressurized water extinguishers, or a charged garden hose that can reach ALL points of the discharge area, shall be kept on hand as close as practical to the points of discharge.

Any fireworks that are left over after the display shall be disposed of immediately in a safe manner. In the event of any misfires left over, the display operator shall place them in water and deactivate them under water until they are harmless, and then dispose of them by safe means approved by this Office.

Only the fireworks items listed on the application shall be discharged under the terms of this permit.

Please submit your application along with the site plan, fire district approval and the fee at least five (5) working days prior to the display.

Fee: Total fee is \$77.00 (\$30 permit fee plus \$47.00 inspection fee) plus an additional \$47.00 inspection fee for each additional inspection.
